Our research group has been the only academic participant of the technology pool of DOE/EPRI for the development of the liquid phase methanol synthesis process (LPMeOH™). Research funding for this project was received from 1982 through 1993 from the Electric Power Research Institute (EPRI). We developed major patents involving catalyst regeneration, post-treatment, and subsequent conversion...

Methanol: The New Hydrogen - MIT Technology Review

Early research into methanol production quickly focused on copper as a prime contender for the basis of a catalytic process to methanol, with Paul Sabatier and Jean-Baptiste Senderens discovering in 1905 that copper effectively catalysed the decomposition of methanol and to a lesser extent its formation. A lot of the early testing looked at what catalysts could effectively destroy methanol ...
